

Slootsmid Major

- Perfect manure distribution
- Manure outlets at 18 centimetres
- High processing capacity
- Robust coated frame

The Slootsmid Major is specially developed for the professional user. A robust coated frame with a working width of 800, 865, or 940 centimetres ensures high processing capacity. Additionally, the machine is equipped with the well-known duo-elements, which can be equipped with both a thin disc and a coulter, as well as a thickened disc.. Due to the clever construction, this machine has a low weight and is very low-maintenance. The arms can pendulate up to 10 degrees, allowing the machine to effortlessly adapt to the soil.

The Major has three Slootsmid mini-exact distributors, which are horizontally aligned in the chassis with outlets positioned upwards. The distributors are interconnected, ensuring an even pressure distribution on all outlets. Because the outlets are positioned upwards, the system always remains filled with manure, providing an immediate supply of manure when opening the hydraulic valves. This allows for very precise fertilization. The connection between the distributors and the outlets is established through continuous hoses with an inner diameter of 50 millimetres, ensuring good flow.

Technical specifications

Type	Major 800	Major 865	Major 940
Working width	8,00 m	8,64 m	9,36 m
Number of duo elements	22	24	26
Transport width	2,95 m	2,95 m	2,95 m
Transport height	3,15 m	3,40 m	3,60 m
Weight	2.400 kg	2.600 kg	2.850 kg

Element

- Two manure outlets per element, elements individually suspended, track- and soil-following
- Pre-cutting discs rotating independently, lubricatable bearing construction
- Standard thin disc, optionally with a Hardox steel disc thickening for guaranteed long service life
- Manure spout and cut-off hose are one unit (outflow boot)
- Mechanical ground pressure adjustment and hydraulic valves

Characteristics

- For professional use
- High processing capacity
- Robust coated frame
- Optimal distribution with three Sootsmid Mini Exact distributors
- Lightweight construction
- Ground tracking through pendulating arms
- Low maintenance
